

1 Set the Diagnostics Profile Options

1. Log in as **System Administrator**.

2. Go to: **Profile > System**

3. Query: **Profile = UTIL%**

4. Set values at **Site** level:

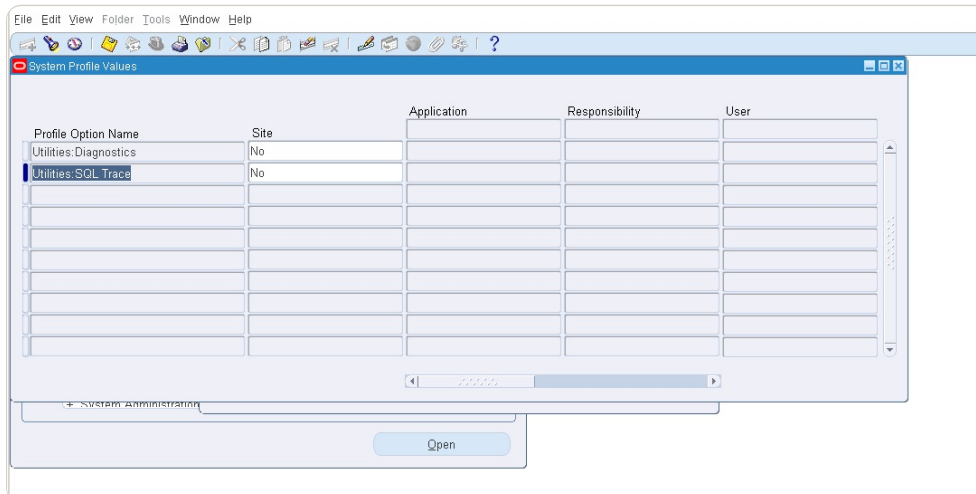

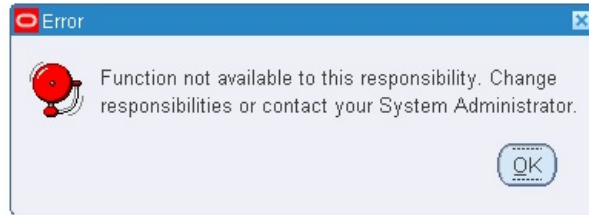

Profile Option	Value
Utilities: Diagnostics	No
Utilities: SQL Trace	No

5. Click **Save**.

2

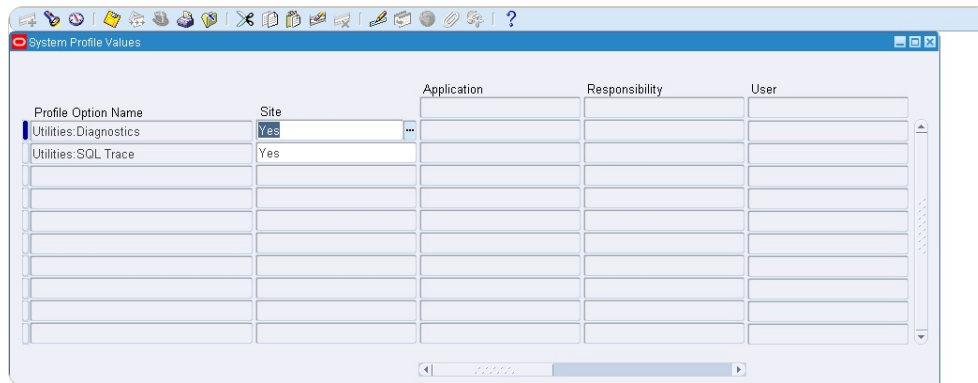

- Help > Diagnostics > Custom Code > Personalize

Error: "Function not available to this responsibility. Change responsibilities or contact your System Administrator."

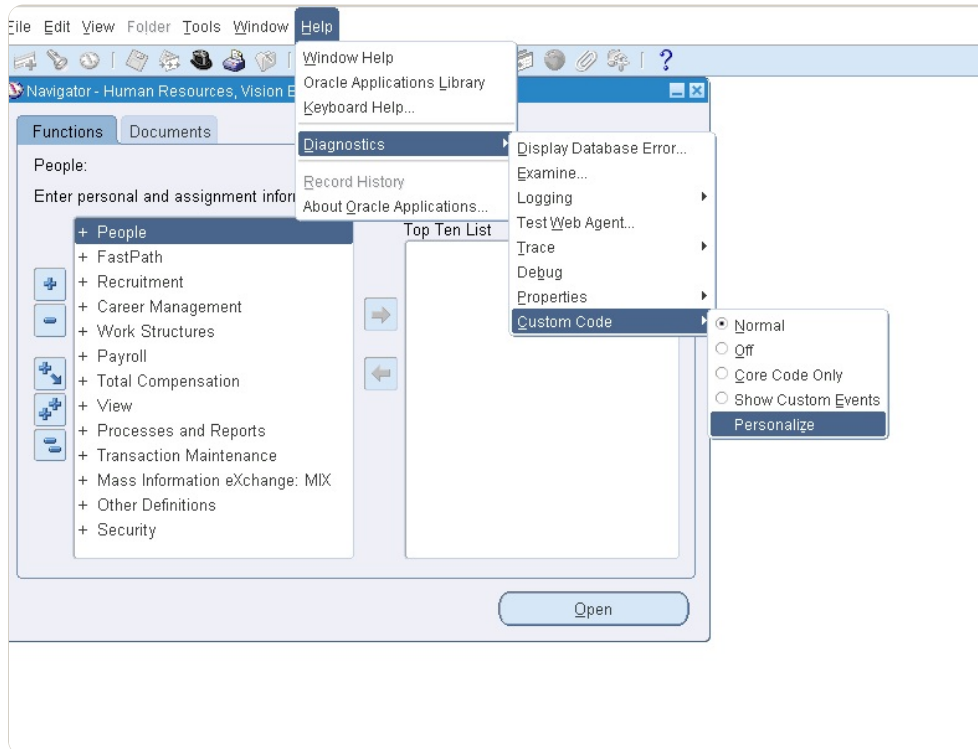

3 Turn Diagnostics Back On

1. Return to **System Administrator > Profile > System**.
2. Set **Utilities: Diagnostics = Yes** at Site level, then **Save**.

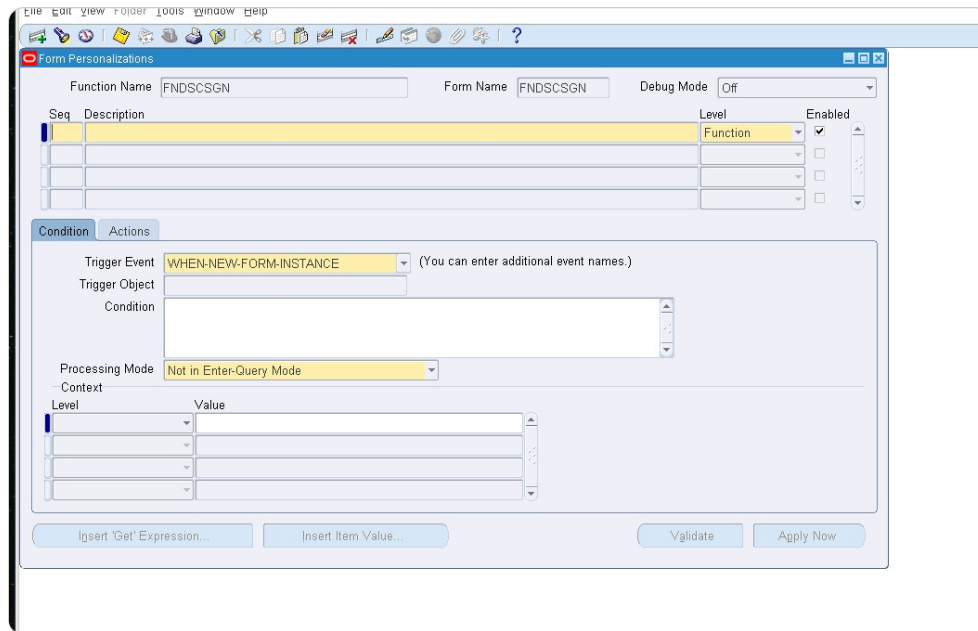

3. Go back to Human Resources and open: **Help > Diagnostics > Custom Code > Personalize**

Personalize option is now enabled

4 Form Personalizations Window Opens

The **Form Personalizations** window now opens normally, ready to add or check personalizations.

5 Turn Diagnostics Back Off

1. After finishing your check, go back to **Profile > System**.
2. Set **Utilities: Diagnostics = No** and **Utilities: SQL Trace = No** again, then **Save**.

Diagnostics restored to default (off)
