

Register SYSDATE Procedure in Oracle EBS

Step-by-step guide based on the provided training notes, with the supplied screenshots placed in process order.

1. Create the SYSDATE EBS Procedure

Create the procedure with the mandatory EBS concurrent-program parameters ERRBUF and RETCODE. The procedure retrieves SYSDATE from DUAL and writes the current date to the concurrent request output.

```
CREATE OR REPLACE PROCEDURE KHADIJA_PR_SYSDT (  
    ERRBUF    OUT VARCHAR2,  
    RETCODE   OUT NUMBER  
) IS  
    V_DT DATE;  
BEGIN  
    SELECT SYSDATE INTO V_DT FROM DUAL;  
  
    FND_FILE.PUT_LINE(  
        FND_FILE.LOG,  
        'YOU CAN SEE LOG DETAILS HERE !'  
    );  
  
    FND_FILE.PUT_LINE(  
        FND_FILE.OUTPUT,  
        'CURRENT DATE = ' || V_DT  
    );  
  
EXCEPTION  
    WHEN OTHERS THEN  
        FND_FILE.PUT_LINE(  
            FND_FILE.OUTPUT,  
            'CHECK YOUR PROGRAM: ' ||  
            ERRBUF || ' ERRCODE = ' || RETCODE  
        );  
END;  
/
```

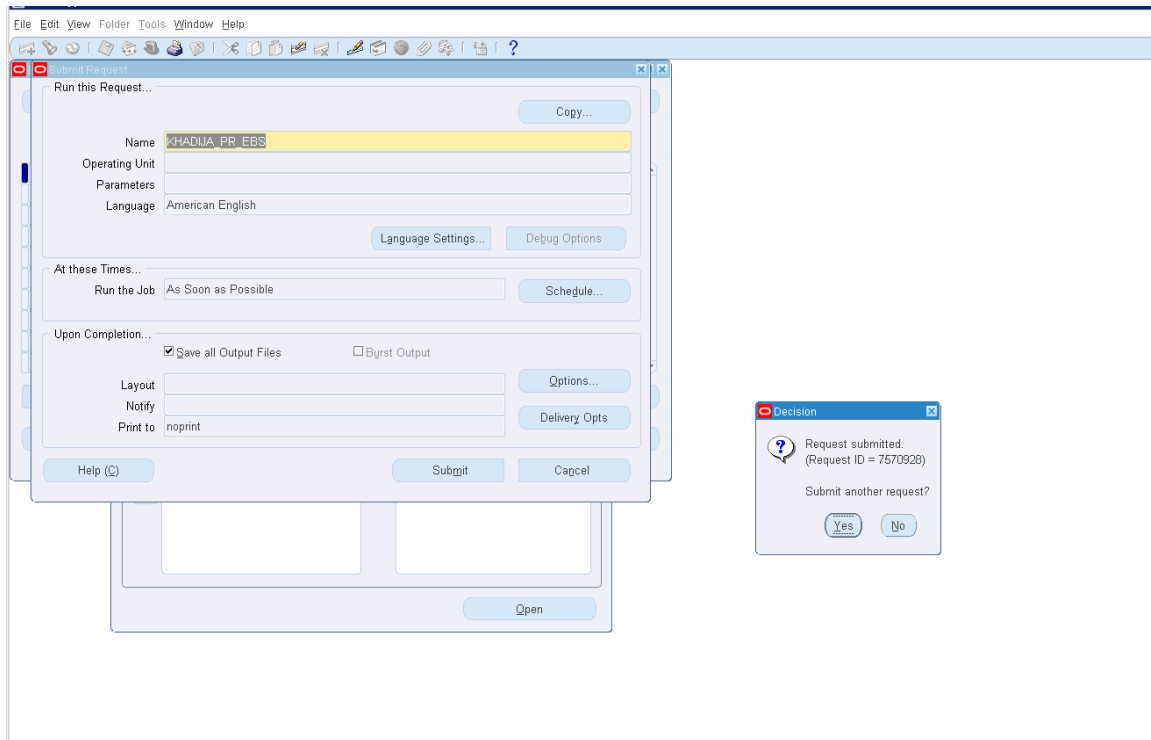

2. Register the Procedure in Oracle EBS

1. Login to Oracle EBS.
2. Switch to the Application Developer responsibility.
3. Go to Concurrent > Executable.
4. Create the executable with the procedure name.
5. Name: KHADIJA_PR_SYSDT.
6. Short Name: KHADIJA_PR_SYSDT.
7. Execution Method: PL/SQL Stored Procedure.
8. Execution File Name: KHADIJA_PR_SYSDT.

9. Save the executable.
10. Go to Concurrent > Program.
11. Create the Concurrent Program.
12. Name: KHADIJA_PR_SYSDT.
13. Short Name: KHADIJA_PR_SYSDT.
14. Application: select the required application used by the training environment.
15. Executable: KHADIJA_PR_SYSDT.
16. Save the Concurrent Program.
17. Add the program to the existing Request Group: go to System Administrator > Security > Responsibility > Request.
18. Query the Request Group (the notes show using KHADIJA%), add the program, and save.
19. Switch to the responsibility that has access to the Request Group.
20. Go to View > Request > Submit a New Request.
21. Choose Single Request and click OK.
22. Click the LOV and select KHADIJA_PR_SYSDT.
23. Click Submit.
24. Choose No when asked whether to submit another request.
25. Click Find and use Refresh Data until the request reaches Completed.
26. Click View Output to see the current date.

3. Submit the Request

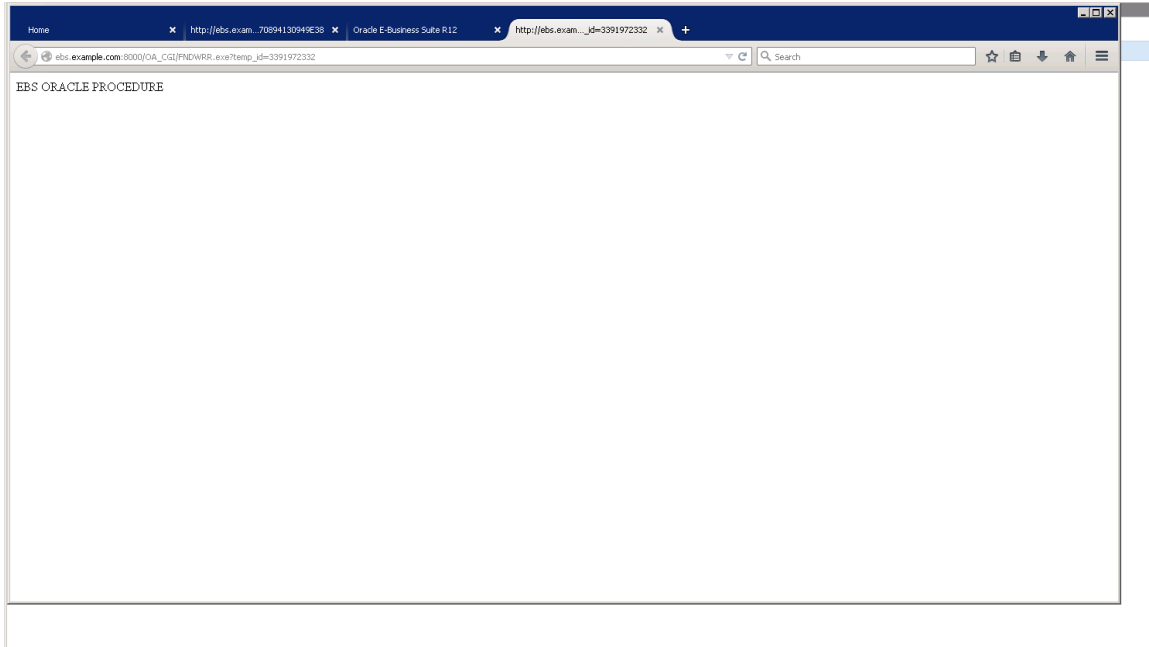

The first supplied screenshot below is the request-submission stage. It shows the program selected and the request submitted successfully.

Screenshot 1 — Submit Request / Request ID displayed

4. View the Procedure Output

After the request reaches Completed, select View Output. The second supplied screenshot shows the generated EBS output.
